ZOOM AT YOUR OWN RISK

Whether it's *'Zoombombings'*, *'Zoomtrolling'* or *'Zoomscraping'*, your business can not afford to use Zoom as a private communication tool for proprietary data and information.

Zoombombing: when a malicious hacker blocks your feed and replaces it with their own subversive content.

Zoomtrolling: when malicious actors disrupt your feed and attack participants with inflammatory content.

Zoomscraping: when a malicious country intercepts your feed to gather private information surreptitiously.
